

Hire talented people, stay out of the way

Front-End Engineer

at DigIO ([View all jobs](#))

Australia

As part of our ongoing growth plans we have multiple positions available for Front-End Developers from Mid to Lead Level across Australia and New Zealand!

Who is DigIO?

We are a passionate team that helps organisations move from ideas or concepts to the delivery of valuable technology experiences.

Our team **develops end-to-end digital solutions**, ranging from technology selection to building and operating phases. Spanning both software and hardware deployments, we deliver and manage scalable, cloud-focused, automated solutions – focused on shared knowledge, continuous improvement and design thinking.

We're also part of **Mantel Group's** 'house of brands' and we're building a group of companies (Eliiza, Kasna, CMD Solutions, Pretzel Lab, Cuusoo, Azenix, Itty Bitty Apps) with open borders so we can support you to take on and develop new skills without leaving an awesome team - we know you won't have one job for life!

About the role:

- Work on **greenfield projects** for household names and develop **high-quality code** that can function with existing code, patterns and architectural techniques
- Implement technology solutions that meet and exceed customer requirements and expectations utilising development best practices such as **CI/CD**
- Active participation in team **agile development** practices as well as knowledge sharing sessions with other DigIO team members
- Ensure appropriate quality is maintained through practices such as **unit testing**
- Design systems that can be managed effectively in production environments
- Help our clients maintain and run reliable applications and systems

We'd love to hear from you if you have:

- Experience building rich applications with modern JavaScript frameworks such as React, Vue.js & Node.js.
- Experience in developing applications on 'greenfield' projects &/or existing applications.
- Knowledge of common productivity tools such as Gulp/Webpack & GIT source control.
- Experience with object oriented design or functional programming and CI/CD.
- A good understanding of modern development frameworks, industry trends and best practice.

We are technology agnostic and are open to Engineers from different technology backgrounds with the ability to learn other technologies.

What's on offer?

- Tailor your working life to your individual needs, whether that be remote, or taking advantage of our awesome Work Hubs.
- You'll get all the tools you need - a new iPhone or Google Pixel, a new Macbook Pro or HP, and not to mention our awesome swag.
- At DigIO, we believe in unique experiences for all. Our 'My Deal' program allows you to tailor your yearly plan, with the support of your Leader, to decide on what's most important to you. That might be extra professional development, extra annual or parental leave, time to work on your side-hustle, or something else completely different! One size does not fit all.
- You'll be genuinely supported by an organisation that cares about not only you but your family as well. DigIO offers Flexible Personal Leave options for those unplanned moments in life.
- Work alongside the most talented technical professionals in the industry and collaborate with colleagues across all of Mantel Groups brands. Interested in Azure, AWS, Databricks, Design Thinking, and the vast array of programming languages? We've got you covered!
- Work on leading projects; greenfield and brownfield projects from startup to enterprise clients
- Join Australia's 2021 #1 Best Workplace in the Medium category as awarded by Great Places to Work Australia.

We've got a clear goal when it comes to growing our team: attract and retain the right talent and provide them with the freedom to explore and grow as individuals. We don't expect you to be an expert in everything, if you are passionate, values driven and have the right attitude - that sounds like a great place to start our conversation!

Sounds like a good match for you?

Click "Apply" to share your details with our talent team and we'll be in touch.

In the meantime, get to know us better by visiting our website and following DigIO on LinkedIn.

We value a diverse workplace and strongly encourage people from all backgrounds and minority groups to apply.
